| Subject Code | 10ME53 | Time | 1.20 pm – 3.30 pm |

Teaching theory subjects and making the students understand the same is a challenging task. It requires a lot of potential and skillsets to hold the student's concentration for the entire hour. The effectiveness of the concept was tested by experimenting a different approach wherein, the students were taught the theoretical aspect of the concept and then were asked to build a model of the same in the form of a presentation before the evaluators. Dr S N Sridhara and the faculty of the mechanical engineering department evaluated the different models exhibited in the exhibition by raising various questions on the topics presented.
